

Full-air**Volkswagen T5**
(all Models)Volkswagen **▶ Product Information**

It is the "magic bus", the brawny Volkswagen T5, simply the king of all light commercial motor vehicles. It's a technological trendsetter. For this successful van, which has managed to bring more and more to the light commercial world in its product lifetime, Drive-Rite has developed a Full-Air suspension which guarantees more driving enjoyment, dynamism and additional safety for the vehicle.

Moreover, it adds maximum flexibility: if the chassis is unevenly loaded and is leaning to one side or to the rear, the IntelliRide-control notices instantly and fills or exhausts the air springs so that the vehicle is always at an ideal ride height. For easier loading and unloading, or getting in and out with a wheelchair, the rear can be raised and lowered. The raised floor level is also ideal if you should need more ground clearance, for example, driving over an embankment or while driving on and off a ferry.

For the T5, Drive-Rite also offers a 4 corner solution, which means Full-Air suspension front and rear, which work intelligently together – the culmination of vehicle technology. With the 4 corner option, automatic levelling is also possible, which levels the vehicle in the horizontal axis when stationary.

The Intelliride system has automatic load levelling at each height. The system continuously monitors inputs and component performance as a means of increasing safety and durability. The system recognizes and responds accordingly to potholes, cross-articulation and extended turns. This intelligence prevents unnecessary activity and air consumption. The system even recognizes unachievable heights, assisting in the prevention of possible damage above or below the vehicle.

Benefits of Drive-Rite Air Suspension:

- + Increased comfort and enhanced driving experience
- + Vehicle stability safely improved under all loaded conditions
- + Vehicle less sensitive to high cross winds resulting in reduced sway and improved handling
- + Individual adjustment of the air spring pressure allows side to side height adjustment
- + Optimized geometry (drive line angles)
- + Constant ride height – load independent
- + High-quality components manufactured in Germany, USA and Ireland
- + Easy to install and user friendly systems
- + Air Springs made by Firestone, the world's No 1 Air Spring Supplier
- + Reliable: Drive-Rite has more than 20 years of experience in air suspension business
- + Fully tested, approved and homologated by the Original Equipment Manufacturer and TUV
